An amazing alternative to traditional paving solutions, our Permadrive material is a totally porous surfacing product that allows water to drain straight through it. Our system uses a unique binding agent that allows the hard surface to gently flex. This reduces the risk of cracking or splitting, even in extreme weather.

The product uses natural stone available in a range of colours, allowing you to create the perfect look for your property.

*Having decided to replace my driveway in resin, I contacted PMP Driveways of Barnsley.*

*I was very impressed by the knowledge and advice given by Alex Pell. Any concerns I had prior to the work were quickly quashed thanks to their reassuring, clear advice and expert recommendations. Quotations and communications were without doubt excellent. The installation was carried out in an expert fashion, and we were continually updated throughout the process. The skills of the operatives, the setting out of materials, and the design of the driveway, all contributed to a professional job.*

*Finally, I'd like to say that the driveway looks extremely impressive and enhances the property. It was an excellent experience.*

*I have no hesitation in recommending PMP for any work in their field, be it domestic or commercial.*

**Mr Derek Boulton**  
*Building Surveyor (retired)*

- Available in a range of colours.
- Soft-installation by hand means no heavy machinery and minimal disturbance.
- Fully SuDS compliant and compatible with local authority building regulations.
- Full guarantee provided.
- Long-lasting
- Can be installed over existing hard surface.
